

### **Ideas from earlier meetings**

#### **Public Schools:**

- \* suspend statutory requirement for elementary PE for next couple of years
- \* small school size adjustment – only get it for schools in separate location; separate administration, faculty and support staff; separate, unique and defined purpose; and an application, approval and review on annual, biennial or triennial bases to ensure continued qualification.
- \* require PED to audit SPED numbers when they don't comport with similar districts.
- \* specify minimum size of school district, with delayed effective date of five years

#### **Higher Education:**

- \* use the high school senior year as the qualifying year, which might save money by keeping high school students engaged and prepare them for college, thus reducing future remedial costs
- \* raise from 24 to 27 the number of credit hours a lottery student has to take each year, which would allow for earlier graduation and, thus, savings to lottery fund
- \* use bridge scholarships at end as an incentive to graduate rather than for the qualifying semester
- \* advancement of a cross-registration program with all higher education institutions so core curriculum classes are always available
